

FLANARY VETERINARY CLINIC

BI-ANNUAL CARE FOR YOUR PET

We recommend a bi-annual physical exam for your pet.

The information we gather at each exam becomes part of your pet's medical history and can be critical if an emergency or sudden illness arises.

As part of a bi-annual physical examination, we:

- Check for significant weight loss, which can be an early warning sign of disease. Obesity is a common problem for older pets. We will also assess your pet's diet and nutritional needs.
- Perform a rectal exam to check for abnormalities and analyze a stool sample.
- Assess the condition of legs, hips, joints, and spine.
- Assess the hair and coat. It should appear healthy and well groomed. Dull, dry, brittle hair or hair loss may indicate an underlying illness. Check skin for infection or signs of fleas, ticks or mites.
- Palpate the abdomen for abnormal masses or pain.
- Listen to the chest for heart murmurs, irregular heartbeat and abnormal lung sounds.
- Examine eyes for cataracts, glaucoma or inflammation.
- Examine ears for ear mites, infection or inflammation.
- Evaluate nose and nasal passages for signs of upper respiratory disease.
- Check for periodontal disease. As many as 95% of all pets two years and older have periodontal disease. We evaluate your pet's teeth and check the color and condition of the gums.
- Palpate lymph nodes to check for inflammation or tumors.
- Check for heartworm and other parasites.

Bi-annual Preventive Care For Your Pet:

Canine Diseases

DHLP-P Vaccine Prevents:

- Distemper
- Canine Hepatitis/Adenovirus Type 1 + 2
- Canine Parainfluenza
- Leptospirosis
